A literature review is a desktop-based research of previous projects and other initiatives that can inform and support the need for a project, as well as provide a foundation for the work to be undertaken.

The review should identify what similar work has been done, what works, and what doesn't, so that you do not have to re-invent the wheel. The review should ideally have recommendations to inform the need for a project and the project design.

It is important to make sure that the literature review does not just describe similar works, but evaluates them in relation to the intended project. It must therefore involve a critical review of works in relation to your intended project.
